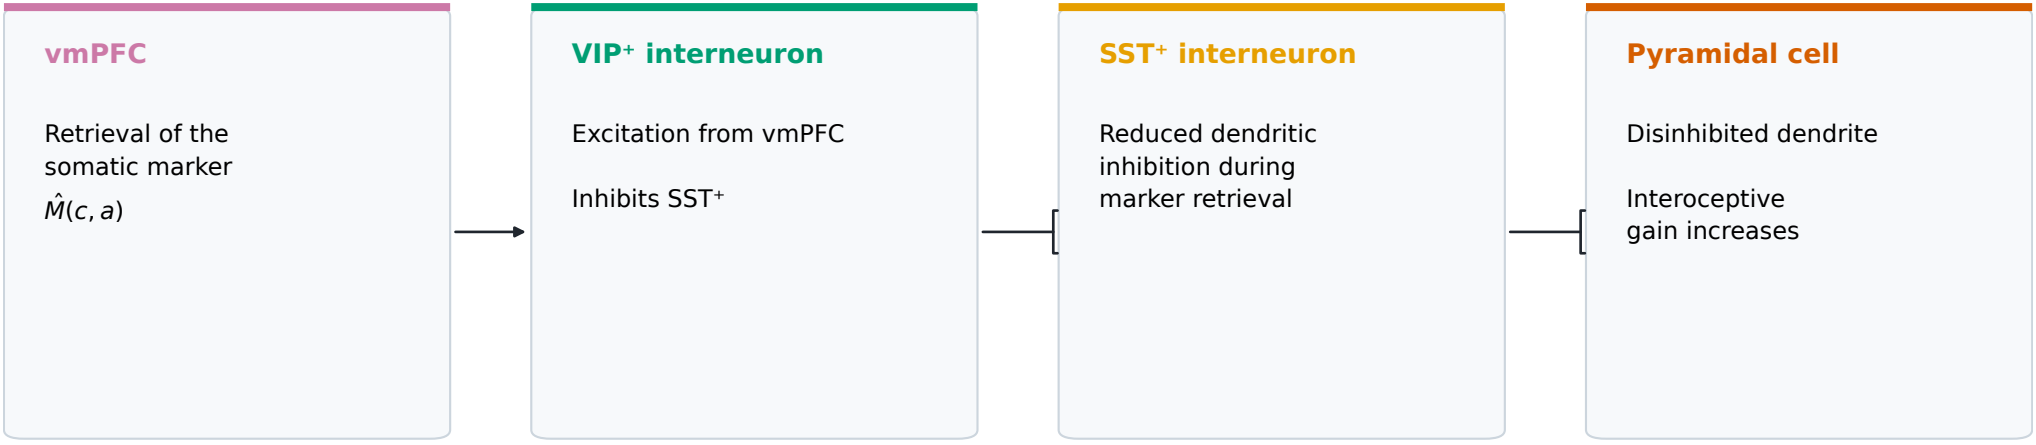
Proposed cortical implementation of somatic-marker gain



Laminar routes

L1: apical input · L4: thalamic evidence
L2/3: PV⁺/VIP⁺/SST⁺ gain circuitry
L5: burst output · L6: thalamic feedback

Apical–basal comparison

Prediction and evidence converge on L5 cells. Plateau physiology does not establish the proposed prediction-error computation.

Paper 1 Fig 2 / Paper 2 Fig 2; arrows specify proposed functional interactions.
