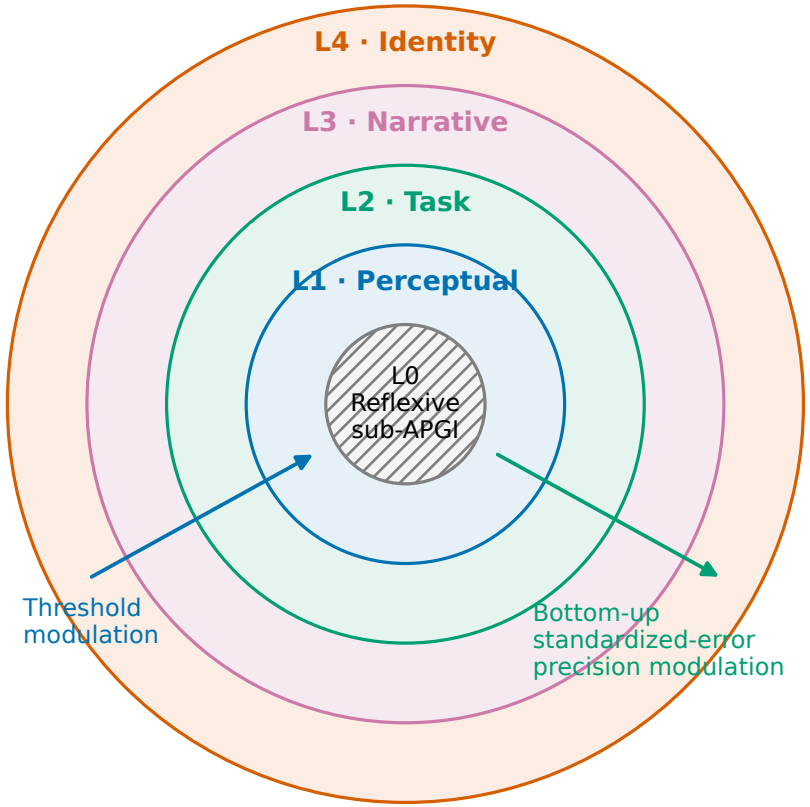
Nested functional levels; distinct operational and spectral timescales



Level	Operational band	OU pole τ
L0	10–100 ms	50 ms
L1	100 ms–3 s	6.6 s
L2	Minutes	15 min
L3	Hours–days	1.4 d
L4	Months–years	6 months

L0 has no ignition threshold.
Neuroendocrine priors set L4 cortical thresholds.
OU poles are conditional geometric model parameters.

Paper 3 §2.1: nesting is computational, not literal anatomy; operational windows are not the OU spectral poles.
