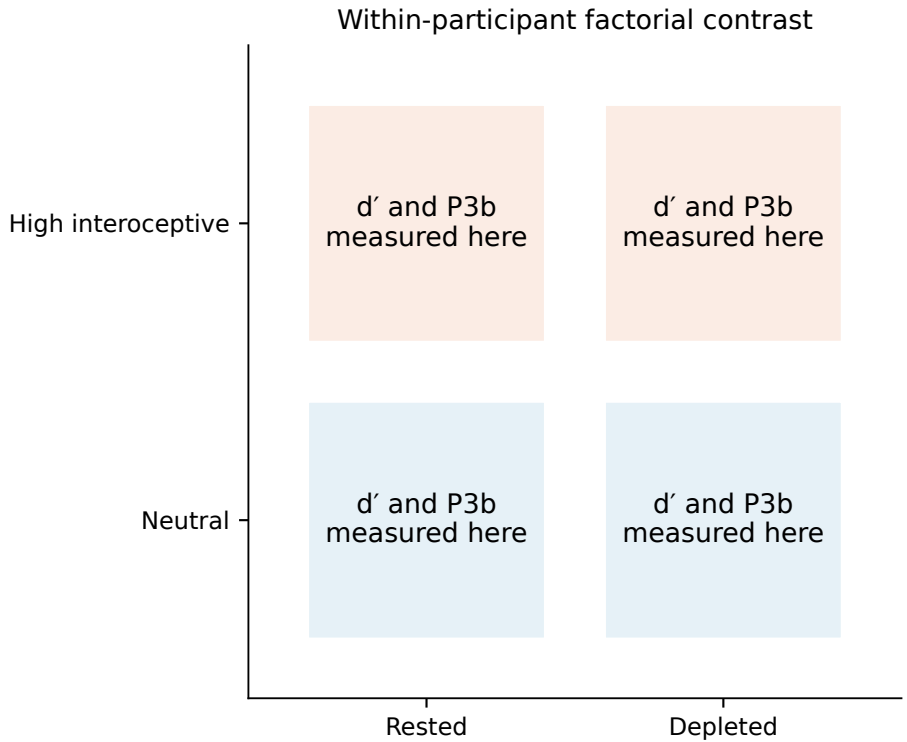
Protocol 4 / State × interoceptive load crossover



Signed margin (Pred 4.A)

Δ = depleted − rested
Δd′extero − Δd′intero ≥ .15 × rested d′intero

Neural contrast (Pred 4.B)

Selective P3b reduction ≥1.5 μV
Registered interaction evidence required

Adjustment (Pred 4.C)

Trial pupil and block RMSSD are covariates
Adjustment does not establish metabolic mediation

Protocol 4, specification 1.1.0. No observed outcomes. Enroll 64 / target 55 / minimum 48; two labs. Positive baseline d′ required for proportional margin.
