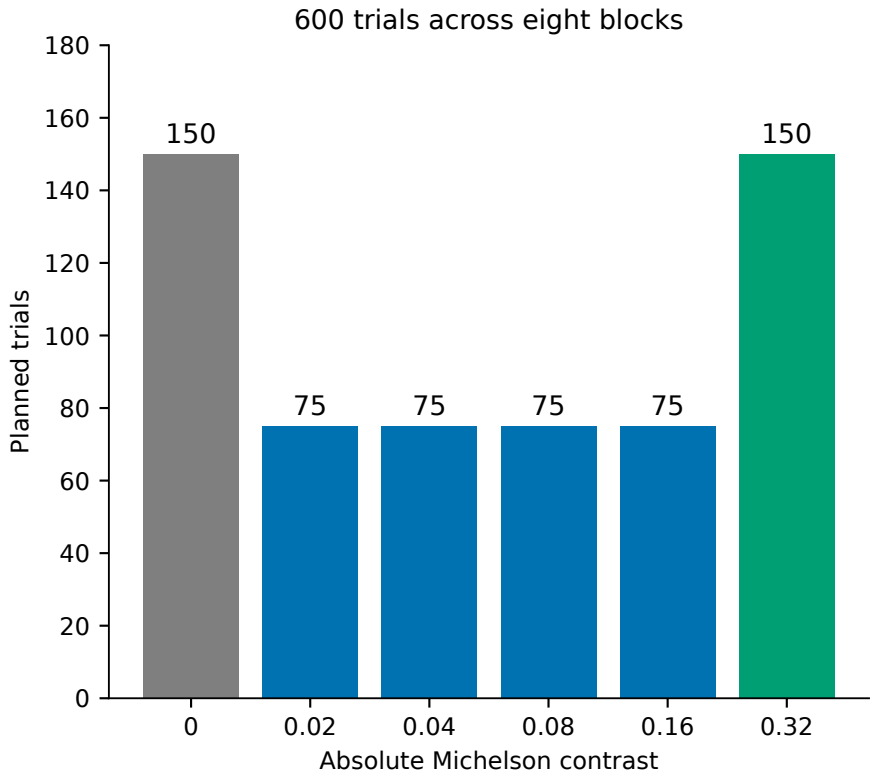
Protocol 6 / Fixed contrasts and a validation-gated analysis



Fixed-contrast mixture test

6.A: dip + mixture evidence, not pooled contrasts
6.B: direct regional comparison + control model

AC1 validation hold

6.C deferred pending estimator recovery/power
Five samples per 50 ms window at 100 Hz

Coverage-specific timescales

6.E: ≥3 dissociable scales + surrogate controls
aINS subset; independent replication needed

Protocol 6, specification 1.1.0. No observed outcomes. Target N=20 / minimum 12; confirmatory–exploratory. 500 ms fixation → 33 ms target → 1 s delay.
